

STERILIZING CABINETS

Operating principle:

The bacteria is sterilised by ultraviolet rays.

Hygiene:

Sloped top and bottom preventing any retention of water or dust. Ilt is impossible to lay objects on the cabinet.

Removable stainless steel rack: it is dishwasher proof and easy cleaning of inside of cabinet.

Safety:

The cabinet is fitted with a device to cut out the light when the door is opened: users are not exposed to UV rays. The stop holds the knives of cutter blades, thereby limiting any risks of them falling out and therefore injury.

Efficiency:

Thanks to the rack, no part of the knife's blade is in contact with a surface likely to obstruct the efficiency of the rays.

The stop is also provided to hold non-magnetic utensils. The cabinet is deep enough to allow for cutting disks (up to 157 mm) to be sterilised.

Eye-catching:

The radiused vertical edges give the cabinet a modern edge blending in with the Tournus stainless steel range.

THE RANGE ALSO INCLUDES:

- **25-knife 1-door cabinet** with stainless steel grid ref. 806 421
- **15-knife 1-door cabinet** with magnetic bar ref. 806 422
- **25-knife 1-door cabinet** with stainless steel grid ref. 806 423
- **50-knife 2-door cabinet** with stainless steel grid réf. 806 424

All the cabinets are also available with lock and key.
