

Technical columns allow fluids and electrical power to be fed down through the ceiling. The columns, made entirely of stainless steel, consist of a structure fixed to the wall and a removable cover.

These columns can be equipped in their lower part with hand wash-basins, disinfection stations, taps and electrical sockets.

Customised production according to layout plan to be provided. Please consult us.

GENERAL CHARACTERISTICS:

Food-grade stainless steel construction with a chromium content of over 17.5%.

- Wall mounting (can be installed after piping has been laid).
- Two-part columns (the height of the upper part varies depending on the ceiling height of the installation room).
- Removable hatch 1.80 m above the floor for access to the shut-off valves.

NB: the piping between the shut-off valves and the taps is not included, nor are the shut-off valves, which must be included in the plumbing package.

TECHNICAL COLUMN

Designation	Reference
Single column	605 299
Column with TS2000N hand wash basin	605 300
Column with sterilizing unit	605 301
Column with automatic reel sterilizing unit	605 305
Column with TS 2000 hand wash-basin and sterilizing unit	605 302
Column with TS 2000 hand wash-basin and automatic roll-up sterilizing unit	605 306
Column with mixer tap	605 303
Column with mixer shower head + swan neck	605 304
